(57) Claims of Utility Model

A cosmetic container with an applicator comprising:

a cylindrical container body 1;

a cylindrical inner container 23 for containing a cosmetic material, the cylindrical inner container 23 being slidably inserted into the cylindrical container body 1 so as to move up and down and being energized upward by a spring 29;

a cylindrical inner container 23, to which an elastic cylinder portion sealing ring 35 is fitted, the elastic cylinder portion sealing ring 35 being airtightly pressed into contact with an inner surface of the container body 1;

a vent 3 provided in a base plate 2 of the container body 1, the vent 3 communicating an interior of the cylindrical container body 1 with an exterior of the cylindrical container body 1;

an application stick 39 detachably fitted to an opening 7 of the container body 1, the application stick 39 being provided at its tip portion with an application member 44, with which a cosmetic material 26 held in the cylindrical inner container 23 is pressed into contact; and

an elastic opening-sealing-ring 41 fitted to a fitting portion 40 of the application stick 39, the elastic opening sealing ring 41 being airtightly pressed into contact with the opening 7 of the container body 1.

[Brief Description of the Drawings]

Fig. 1 is a cross sectional view of a device according to one embodiment, in which the right half shows a state where a cosmetic material is held in the device and the left half shows a state where no cosmetic material is held in the device. Fig. 2 is a cross sectional view of a prior art device.
